              The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CegA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the

(I) is useful, for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                        Synthetic.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described

Disclosure; Page 137; 139pp; English.

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC copy of that gene; and (4) eliciting an immune response in an animal, and (a) eliciting an immune response in an animal, and (but of the gene; and (c) eliciting an immune response in an animal, and comprising a recombinant AgfA comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the complymer into the animal in conjunction with a carrier or diluent. (I) is consequence segments of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for celliciting an immune response in an animal. In a fimbrial presentation consequence (up to a system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein sets both the communogenicity and adhesion properties relevant for an efficient live immunogens, which may be important for directing an immune response consequence in the inserted epitope, and hybrid fimbriae are easy and consequence in a system in the present sequence is given in the present in the inserted epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 123;

The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEFI7/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbriae in the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, (2) CC chomologous species; (3) directing recombinant gene into the chromosome of the comprising a recombinant gene CC copy of that gene; and (4) eliciting an immune response in an animal. CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the cuseful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to immunogenicity and adhesion properties relevant for an efficient live conditions the carrier fibbrial subunit protein are usually strong companish the inserted epitope, and hybrid fimbriae are usually strong conditions which may be important for directing an immune response in an immune response conditions are usually strong conditions. The present sequence is given in the expressive to purify in large amount. The present sequence is given in the examination of the present invention.
Sequence 151 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Page 139; 139pp; English

(I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong
                E, coli CsgA subunit 15 kDa protein.
                                                          04-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                segment of the gene has been replaced by a beginning. Also described a sequence which encodes a foreign epitope or antigen. Also described a sequence which encodes a foreign epitope or antigen. Also described a sequence which encodes a foreign expension of salmonella. Escherichia coli and
                                                                                                  ABR82651
                                                                                                                                       ABR82651 standard; protein; 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2000-672631/65.

                                                                                                                                                                                                                                                                           The invention relates to an isolated peptide capable of binding a mammalian plasma protein or of generating an immune response in a mammal selected from sequences shown in ABR82642, ABR82648-49. The peptide or antibody is useful for treating a bacterial infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infection. The peptide that is immobilized on a solid support is also useful as a reagent for determining the ability of a plasma protein to bind to bacteria. The present sequence represents an E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated peptide capable of binding a mammalian plasma protein, useful in the manufacture of a medicament for the prevention and/or treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infections.
                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-646136/61.

Sequence, Patent No. 57500.

Patent No. 57500.

GENERAL INFORMATION:

APPLICANT: Hoeger, Thomas

APPLICANT: Ultsch, Andreas

APPLICANT: Bach, Alfred

APPLICANT: Sterrer, Sylvia

APPLICANT: Lemaire, Hans-Georg

APPLICANT: Lemaire, Hans-Georg

TTTLE OF INVENTION: Subunits of Glutamate Receptors, Their

TOTAL OF INVENTION: Preparation and Their Use

Perfect score:
           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                        Score

curlin nucleator protein csgB precursor - Escherichia coli (strain K-12) N;Alternate names: csgB protein; curlin nucleation component; minor curlin C;Species: Escherichia coli C;Species: Escherichia coli C;Date: 12-Feb-1998 #sequence revision 20-Feb-1998 #text_change 01-Mar-2002 C;Accession: S70787; F64846

A;Description: minor component of wild-type curli; interaction between CsgA and CsgB A;Note: curli are thin, coiled fibers expressed on the surface of Escherichia coli th and H-kininogen; in the absence of CsgA, CsgB can self-assemble into polymers F;1-21/Domain: signal sequence #status predicted <SIG> F;2-151/Product: minor curlin chain #status predicted <MAT> A;Cross-references: EMBL:X90754; NID:g1147558; PIDN:CAA62281.1; PID:g1147563
A;Experimental source: strain K12, substrain W3110
A;Note: the nucleotide sequence as submitted to the EMBL Data Library, Augus
